N-Repeated Element in Size 2N Array

Easy

In a array \mathbb{A} of size $2\mathbb{N}$, there are $\mathbb{N}+1$ unique elements, and exactly one of these elements is repeated \mathbb{N} times.

Return the element repeated N times.

Example 1:

```
Input: [1,2,3,3]
Output: 3
```

Example 2:

```
Input: [2,1,2,5,3,2]
Output: 2
```

Example 3:

```
Input: [5,1,5,2,5,3,5,4]
Output: 5
```

Note:

- 1. 4 <= A.length <= 10000
- $2. \quad 0 \iff A[i] \iff 10000$
- 3. A.length is even
